

a $\alpha\beta 1$ blockade reduces DSS-colitis pathology

b MPO in marker-positive neutrophils

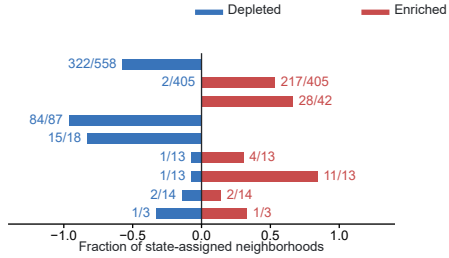

c MiloR neighborhood remodeling

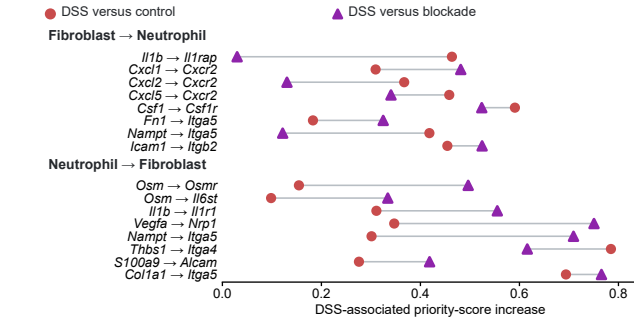

Level 3 states | blockade versus DSS

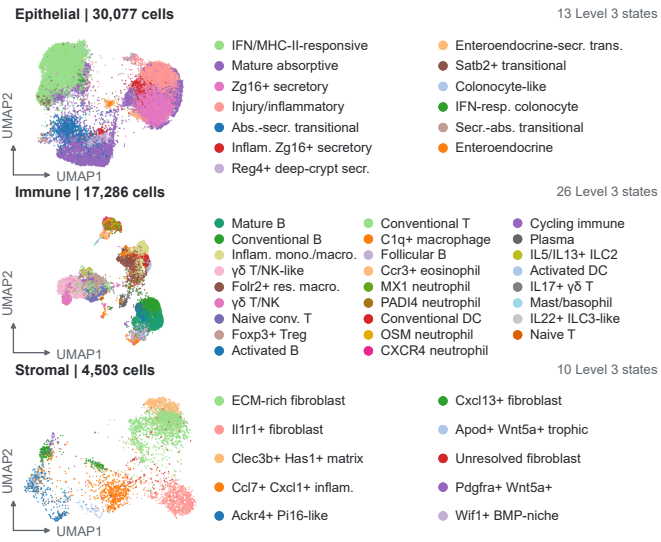

IFN/MHC-II-responsive
Injury/inflammatory epithelial
Inflam. Zg16+ secretory epithelial
Conventional B cell
Il1r1+ fibroblast
Osm-associated neutrophil
Pad14-associated neutrophil
Mx1-associated neutrophil
Cxcr4-associated neutrophil

e Reciprocal signaling routes

c Compartment-specific UMAPs

f Predicted receiver-cell pathways
