

a Epithelial RNA programs

Whole epithelium | DSS n=6; ablation n=4; blockade n=12

● FAP ablation ▲ α5β1 blockade

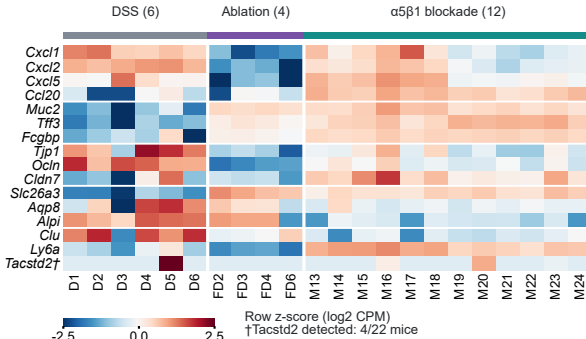

c Cell-state composition

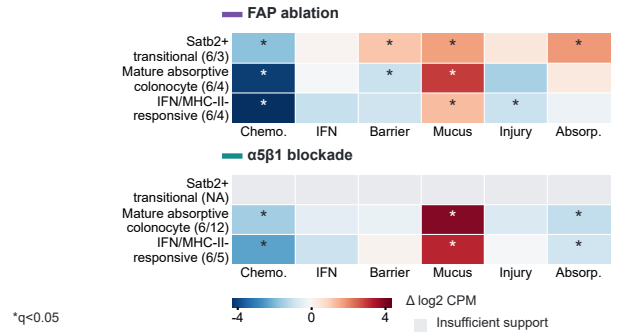

e Epithelial gene expression

Mature absorptive colonocytes | 16 selected genes

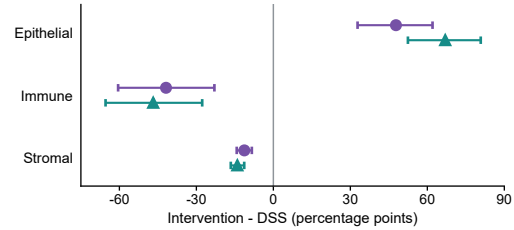

b Within-state epithelial programs

≥20 cells per mouse; n = DSS / intervention

d Recovered-cell proportions

DSS n=6; ablation n=5; blockade n=12

C: *q<0.05; **q<0.01

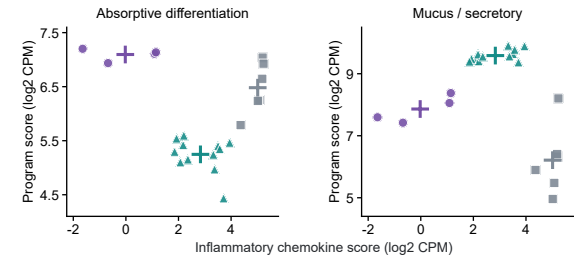

Shared DSS reference; separate interventions.

RNA programs do not measure epithelial repair.

f Individual-mouse epithelial profiles

Whole epithelium | n=6 / 4 / 12 mice

■ DSS ● Ablation ▲ α5β1 blockade

Small symbols, mice; large crosses, group means.
