

Cell-state concordance and predicted communication

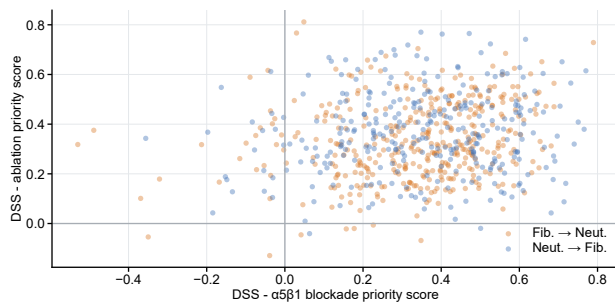

Separate stromal interventions compared with a shared DSS reference

a Cell-state response concordance

b Predicted interaction concordance

691 routes: $\rho=0.15$, $P=0.00013$; core: 490/502 attenuated

Panel c: intervention key

● FAP-lineage ablation

▲ $\alpha 5 \beta 1$ blockade

Positive values indicate lower predicted communication priorities relative to DSS.

c Predicted reciprocal routes
