

Cell-state concordance and predicted communication

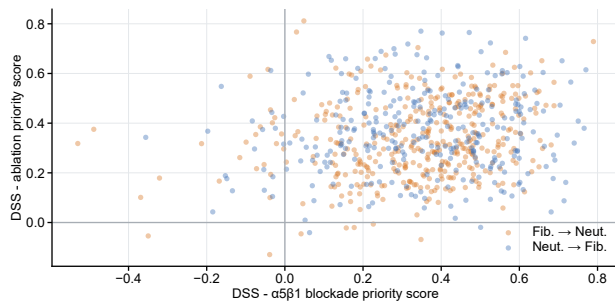

Separate stromal interventions compared with a shared DSS reference

A Cell-state response concordance

B Predicted interaction concordance

691 routes: $\rho = 0.15$, $P = 0.00013$; core: 490/502 attenuated

Panel C: intervention key

● FAP-lineage ablation

▲ $\alpha 5 \beta 1$ blockade

Positive values indicate lower predicted communication priorities relative to DSS.

C Predicted reciprocal routes
