

a TAURUS UC: paired inflammation

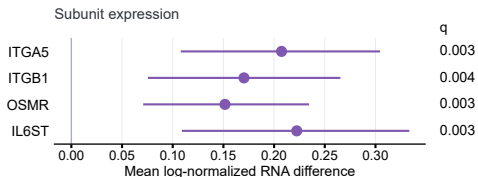

Inflamed vs noninflamed; 95% bootstrap CI

Myeloid: monocyte proxy; TAURUS did not retain neutrophils.

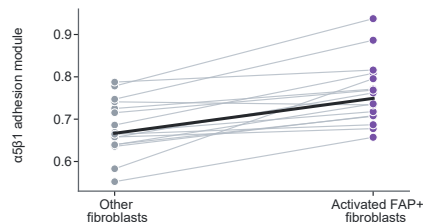

c Receptor availability in activated FAP+ fibroblasts

Activated FAP+ minus other fibroblasts; 16 paired patients; 50 matched biopsies

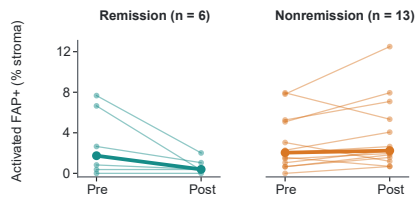

b FAP+ fibroblast adhesion state

16 patients; median paired Δ = 0.07

d Activated FAP+ cells after anti-TNF

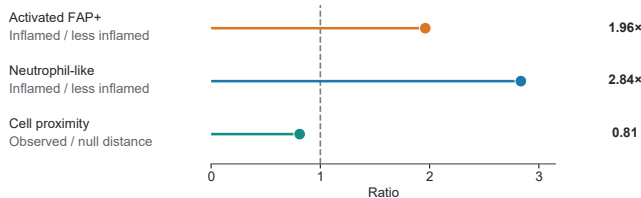

Site-matched pre/post adalimumab

Lines: patients; bold lines: group medians

e Paired spatial validation in UC

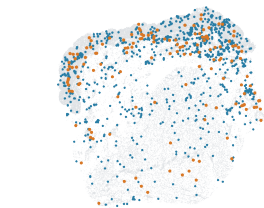

One donor; paired UC sections (SCP3818)

Proximity: P = 0.005; 1,000 size-matched null sets

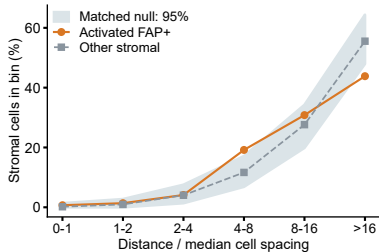

f Spatial context of the activated-FAP niche

UC1 inflamed; one donor

Neutrophil-like (n=879)
Activated FAP+ (n=146)

Nearest neutrophil-like cell

g Cross-system pathway responses
